SUMMARY

Computer Science Engineering student at JB Institute of Technology, focused on cloud computing and full-stack application development. AWS and Microsoft Azure AI certified, with hands-on experience building secure serverless AWS systems and responsive React applications. Interested in cloud infrastructure, scalable web applications, and practical software development.

EDUCATION

B.Tech - Computer Science and Engineering JB Institute of Technology	— 2024 - 2028
Class 12 - PM Shri Kendriya Vidyalaya No. 1, Gaya CBSE	— 2024
Class 10 - Al-Momin International Public School CBSE	— 2022

TECHNICAL SKILLS

- **Programming:** JavaScript, TypeScript, HTML5, CSS3
- **Frontend:** React, Node.js, Tailwind CSS, Framer Motion, Vite, Capacitor
- **Cloud and DevOps:** AWS (EC2, S3, Lambda, API Gateway, DynamoDB, Cognito, IAM, KMS, CloudFront, VPC), Terraform, Serverless Architecture
- **Data and Tools:** Amazon DynamoDB, Firebase Firestore, Git, GitHub, REST API Design, JWT Authentication

CERTIFICATIONS

- AWS Cloud Certification
- Microsoft Azure AI Certification

OPEN SOURCE AND LEADERSHIP

- GirlScript Summer of Code (GSSoC) - Contributor on the Agent AI track
- Campus Ambassador - represented and promoted technical programs on campus

PROJECTS

SecureVault, Cloud Document Management Platform ([GitHub](#))

- Architected a secure, serverless AWS platform across VPC, EC2, IAM, S3, CloudFront, API Gateway, DynamoDB, KMS, and Cognito, designed for free-tier compatibility and low operating cost.
- Built a Cognito-authenticated React frontend with direct-to-S3 presigned uploads and downloads, plus Lambda-backed REST endpoints secured with Cognito JWT bearer tokens.
- Developed a responsive dashboard with drag-and-drop upload, file filtering and search, and end-to-end audit-trail visibility for upload, download, view, and delete activity.

PulseWatch, Website and API Uptime Monitoring Dashboard ([GitHub](#))

- Built a React and Vite frontend for a website and API uptime monitoring dashboard, presenting service health and monitoring information in a clear, responsive interface.
- Integrated Amazon Cognito authentication and React Router client flows to support protected dashboard access and navigation.
- Configured API connectivity through environment-based settings and deployed the static frontend to Amazon S3 for public access.

KrishiX, Direct AgTech Marketplace ([GitHub](#))

- Built a commission-free B2B marketplace connecting farmers directly with wholesale buyers through role-based Farmer and Buyer consoles.
- Implemented crop listings, pre-harvest advance bookings, direct buyer-seller negotiation, and a live price ticker benchmarked against Agmarknet mandi rates.
- Integrated Firebase Authentication and Firestore security rules for role-based data isolation, then packaged the application for iOS and Android with Capacitor.

HOBBIES
